

The Problem: when a user exits before completing the game they are playing, how does one track this? And display this in the Carousel?

One way to solve this problem is incrementing a global Counter whenever a user starts a game, not just selecting in the Carousel but when the game starts. A flowchart below shows this: A simple yet effective method to implement

The Issue with this method is anyone currently playing will be counted as having abandoned even if they don't intend to, resulting in incorrect data.

Another method is using *onbeforeunload* this event will trigger when the user attempts to leave the page; on refresh; or

submitting a form, this is commonly used as asking confirmation to leave the page, we can instead use this to update a global counter that the website can use to display game abandons. Below is another flowchart to demonstrate this method:
